

INVITATION

to the International Conference
January 28, 2010

Košice

WASTE - TO - MATERIALS AND ENERGY

Under auspices of: **Ministry of Environment SR**

LOCAL CHALLENGE WITH GLOBAL IMPACT

„Every individual may view this issue differently. However, a hot topic – waste management is about to accompany us not only at present but even in distant future. Waste has become a global issue, a reality to which adequate and excess attention must be paid these days. From the worldwide viewpoint we perceive the correct waste disposal as some aid to mankind. We understand it from the view of protection of health and nature as well as preserving natural resources. However, many do not realize that incorrect management of waste has negative impact on climate changes. Production, distribution and usage of various products as well as disposal of end-pieces i.e. waste is a result of emissions into atmosphere called „greenhouse gas“. Waste production is being increased together with growths of population and industrialization each year. The situation is becoming alarming...“
